

Archer Electrical

CASE STUDY/LEISURE/ 086 SEPT 2019

CLIENT: MCDONALDS – MODULAR BUILD  
LOCATION: Glenrothes  
DESCRIPTION: Full Electrical Installation  
DATE: September 2019

**Modern, Efficient Modular Build Restaurants**

We were commissioned by Elliott’s Group for the electrical installation of a new two-storey Drive-Thru restaurant in line with McDonalds planned expansion programme.

We worked closely with Elliott’s to evolve the design concept and install the restaurant electrical infrastructure within their factory prior to this modular build being delivered to Glenrothes enabling a very short programme of just 5 weeks on-site.

This new two-storey restaurant seats up to 140 people along with a Drive-Thru. The building includes the dining area and toilets and staff areas including kitchen and servery, offices and storage.

The buildings are delivered to site as fully fitted out modules including all electrics first fixed. The modules are the deliver to site and lifted into place then the final connections and commissioning works are completed.

**Testimonial:**

What the client said:

“Hi Jon, Just like to thank you for getting the job completed on schedule. Thanks to you and your team for all time and effort required to achieve good job Thanks again”

Mick Marsden – Elliott's Group

“Hi Jon, thank you for a great job up at Glenrothes – all feedback was positive and welcomed.”

Paul Beard – Elliott's Design
