

Archer Electrical

CASE STUDY/RETAIL/ 017 MARCH 2011

CLIENT: TIE RACK ROLLING LUGGAGE
 LOCATION: Heathrow Airport T3
 DESCRIPTION: Full Electrical Installation
 DATE: March 2011

Having previously completed work at Heathrow Airport we are registered contractors with BAA. Projects conducted within Airports are highly complex and this project for Tie Rack was no different requiring meticulous planning, an excellent understanding of logistics, H&S and security compliance procedures.

This dual-branded Tie Rack/Rolling Luggage store's electrical installation was successfully completed in just over one week during night time working

Tie Rack is a British-based tie retailer that sells scarves, cufflinks, and many other items of clothing. The stores are often small due to the nature of the product, and as such, are found in airports, railway stations, and shopping centres across the world.

Tie Rack was founded in August 1981, first opening in Oxford Street London and in 1984 the first airport store opened at Glasgow Airport. There are now over 330 stores in 24 countries.

Testimonial:
 What the client said:

"Working with Archer Electrical has been fantastic towards the back end of last year and you are very highly regarded as a company by all who have worked with you thus far".

Laura O'Hanlon
 Supply Chain Coordinator - Barlow Group
